## Winners in the Shift to Clean Transportation Race

2020 was a promising year for the uptake of EVs and EVSEs in most of the world. Almost 90% of the charge points added were installed in 10 countries. China was by far the biggest market with almost 50% share of the global market; whereas the highest growth was in Germany due to a high number of residential charging points added.

Top 10 countries with highest number of charge point installations in 2020

Annual Additions EVSE: 1,544,696 Installed base: 5,640,693
